KMD 52 / 75 MAC Valve*

DESCRIPTION:

This upgrade focusses on the pressure tank and a MAC valve. The existing proportional valve fills the pressure tank continuously. The software calculates an over pressure compared to the set pressure. If the forming air is activated, the compressed air from the pressure tank expands into the forming tool. Due to the raised pressure the set pressure at the forming tool is reached remarkably faster. The proportional valve compensates only small pressure differences. The forming air exhausts directly over the MAC valve. This will reduce the production cycle time.

YOUR ADVANTAGES:

- ▶ Improved forming results
- ▶ Reduction of cycle time

* The MAC valve can be retrofitted in most KIEFEL-machines of series KMD 52 and KMD 75.

We would be pleased to make a quotation according to your machine.
To provide best assistance please mention your machine type and ID-number.
