KMD/KMV: Foil Edge Heating*

DESCRIPTION:

The foil edge heating is mounted at the infeed side and is mechanically adjustable by hand wheel. The heating pipes of the foil edge heating also serve as foil track. Heating the foil edge provides a constant cut-in depth of the needle chain into the foil to duct the foil accurately. The set-temperature can be adjusted on the operation screen.

YOUR ADVANTAGES:

- ▶ Constant cut-in depth of the needle chain when using critical foils
- ▶ Reduced wear on feed components

* The foil edge heating can be retrofitted in most KIEFEL KMD- and KMV- machines.

We would be pleased to make a quotation according to your machine.
To provide best assistance please mention your machine type and ID-number.
