

**UPGRADES
RETROFITS**

Servo regulation

Applicable on all Kiefel generators

Our standardized retrofit kits and custom modernization considerably improve your Kiefel systems' parameter fine tuning, efficiency and utilization. The Kiefel retrofit kits reduce wear, improve machine availability and save costs for the long term. We update your system to the state of the art. Old and obsolete parts will be replaced by latest technology components.

The new HMI touch technology guarantees a fast and easy adjustment of the welding parameters. The Servo-drive for the AP-movement reduces downtime and increases reproducibility.

Main benefits at a glance:

The HMI touch technology addition guarantees a fast and clear operation of the welding parameters

Applicable for all Kiefel generators

Quick and easy availability of spare parts due to latest technology of drive and control components

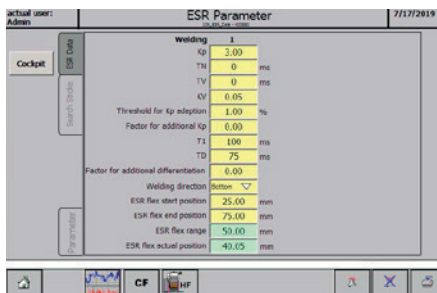

Process data monitoring for better process reliability and reproducibility

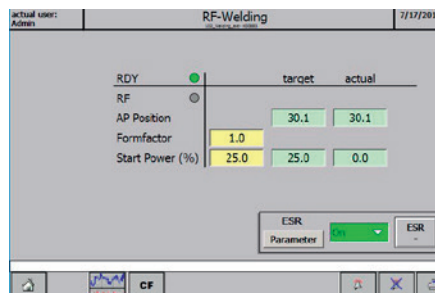

Servo values and faults displaying

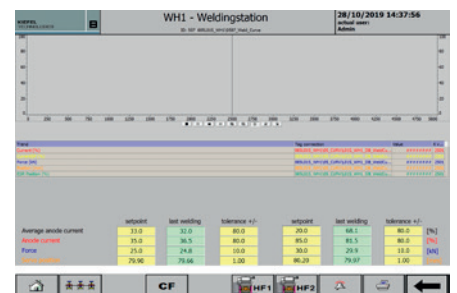

If requested with remote support via internet using the Kiefel MB-connect router
