

UPGRADES & RETROFITS

Film edge heating

For clean processes!

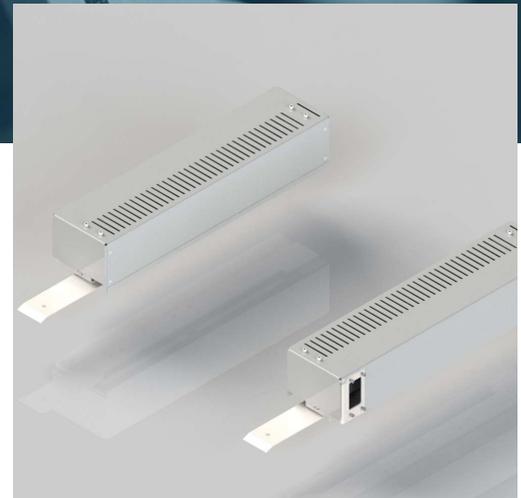

Our film edge heating add-on makes it easier to pin the chain rail into the film of all common thermoforming materials.

Preheating the edges of the film minimizes the creation of plastic particles.

Reducing the load on the chain rail system increases its service life.

Take your product quality and your production efficiency to the next level!

Ask your KIEFEL contact about our film edge heating!

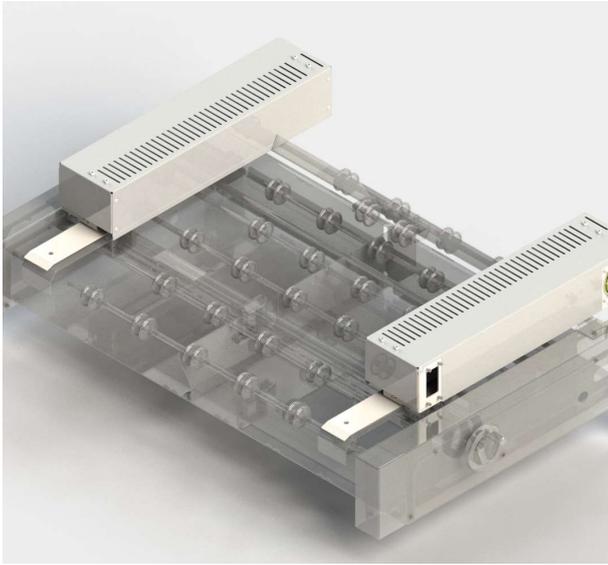

We have the solution!

Upgrade to benefit

Film edge heating

Requirements

- mbConnect remote maintenance (mbConnect MDH871; also available as a retrofit)
- Straight infeed table
- Recommendation! Use the straight infeed table with rollers to prevent scratches (also available as a retrofit)

Scope of delivery

Film edge heating including electrical control, electrical diagram,
Installation by KIEFEL personnel on site
A remote software update of the machine is necessary.

Your Advantages

Reduced plastic particle formation in production

Can be used for all types of film

Extended chain rail service life

How to easily find your new solution:

Supply your machine ID to your contact person.

Installation and commissioning are carried out by a KIEFEL Service technician.
The software update is carried out remotely by a KIEFEL service programmer.

After commissioning, the machine will be handed over to you ready for production.
Process parameters are also added.

Machine type

KMD78.1 Speed ID 297-xxx
KMD78.1 Premium ID 296-xxx
