Secure remote maintenance mbConnect MDH871

Save time and money!

The global digitization of the telephone network means remote maintenance via an analog modem connection is no longer possible.

As a result, we can no longer connect to your machine to support you in the event of a malfunction! We are therefore offering you our proven mbNET router solution as a retrofit for existing machines. During urgent machine stops, the mbNET router enables our experts to connect to your machine and diagnose the fault in the shortest possible time.

The mbNET router is a time and cost saving solution.

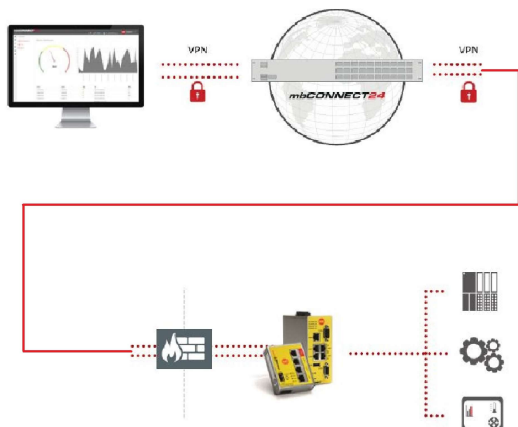

We have the solution!

Secure remote maintenance

Requirements

Requirements for your company firewall:

- DHCP
- Open TCP-Ports: 1194, 443, 80
- Enable device MAC address

Scope of delivery

mbNET-Router configured and licensed, connection cable, electrical diagram

Your benefits

- + Secure connection to your machine through data encryption
- + Comprehensive fault diagnosis by recording actual machine states (e.g. axis positions, input signals)
- + Reduced on-site work
- + Enables the possibility to update the visualization and plc by remote maintenance

This is how quickly you can get your new solution!

Supply your machine ID to your contact person.

Installation can be carried out by your own maintenance and IT technician. Installation instructions are included.

The router is ready for operation immediately after installation. Process parameters do not change.

Machine type

all KIEFEL machines of KMD or KTR series
